

Volume of Prisms, Pyramids, Cones and Spheres

1. Determine the volume of each geometric solid shown below.

$$\begin{aligned}
 V &= \text{area of base} \times \text{height} \\
 &= (8.0 \times 4.0) \times 6.0 \\
 &= 32 \times 6 \\
 &= 192 \text{ cm}^3
 \end{aligned}$$

$$\begin{aligned}
 V &= \text{area of base} \times \text{height} \\
 &= \left(\frac{4 \times 5}{2}\right) \times 10.4 \\
 &= 10 \times 10.4 \\
 &= 104 \text{ cm}^3
 \end{aligned}$$

*need height of triangle first

$$\begin{aligned}
 h^2 &= 7.6^2 - 3^2 \\
 h^2 &= 57.76 - 9 \\
 h^2 &= 48.76 \\
 h &= 7.0 \text{ cm}
 \end{aligned}$$

$$\begin{aligned}
 V &= \text{area of base} \times \text{height} \\
 &= \left(\frac{6 \times 7}{2}\right) \times 6.4 \\
 &= 21 \times 6.4 \\
 &= 134.4 \text{ cm}^3
 \end{aligned}$$

2. The formula for the volume of a **rectangular-** or **triangular-**based prism is the same as the formula for the volume of a **square-**based pyramid.

Determine the volume of each pyramid shown below.

$$V = \frac{\text{area of base} \times \text{height}}{3}$$

$$V = \frac{\left(\frac{3 \times 4}{2}\right) \times 6}{3}$$

$$V = \frac{6 \times 6}{3} \quad V = 12 \text{ cm}^3$$

$$V = \frac{\text{area of base} \times \text{height}}{3}$$

$$V = \frac{(10 \times 8) \times 12}{3}$$

$$V = \frac{80 \times 12}{3} \quad V = 320 \text{ cm}^3$$

3. Find the volume of each solid.

$$r = 5.7$$

$$h = 10.5$$

$$V = \frac{\pi r^2 h}{3}$$

$$= \frac{\pi (5.7)^2 \times 10.5}{3}$$

$$= \frac{\pi \times 32.49 \times 10.5}{3}$$

$$= 357.2 \text{ cm}^3$$

Find h

$$h^2 = 35^2 - 10^2$$

$$\sqrt{h^2} = \sqrt{1125}$$

$$h = 33.54$$

$$V = \frac{\pi r^2 h}{3}$$

$$= \frac{\pi \times 10^2 \times 33.54}{3}$$

$$= 3506.1 \text{ cm}^3$$

$$r = 11$$

$$V = \frac{4\pi r^3}{3}$$

$$V = \frac{4 \times \pi \times 11^3}{3}$$

$$V = 5575.3 \text{ m}^3$$

$$r = \frac{19.6}{2}$$

$$r = 9.8$$

$$V = \frac{4\pi r^3}{3}$$

$$= \frac{4 \times \pi \times 9.8^3}{3}$$

$$= 3942.5 \text{ yd}^3$$
