Cosine Law Worksheet

Make sure your calculator is in the proper mode - degrees (deg).
Diagrams are not to scale!

1. Use the diagram below to fill in the blanks and complete the Cosine Law.

$$c^2 = \underline{a}^2 + \underline{b}^2 - 2\underline{a}\underline{b} \cos(\underline{C})$$

2. "Solve" the triangle below (find the values of all missing sides and angles)

$$q^2 = r^2 + s^2 - 2rs \cos$$

LS

$$\frac{\sin S}{8.5} = \frac{\sin 48}{8.5}$$

$$S = 48^\circ$$

$$q^2 = 11.4^2 + 8.5^2 - 2(11.4)(8.5) \cos 48^\circ$$

$$q^2 = 202.21 - 129.64$$

$$\sqrt{q^2} = \sqrt{72.57}$$

$$q = 8.5$$

$$R = 94^\circ$$

Date:

3. "Solve" the triangle below. (find the values of all missing sides and angles)

$$\begin{aligned}\cos N &= \frac{m^2 + o^2 - n^2}{2mo} \\ &= \frac{9.1^2 + 10.3^2 - 15.7^2}{2 \times 9.1 \times 10.3} \\ &= \frac{-57.59}{187.46}\end{aligned}$$

$$\cos N = -0.3072$$

$$N = 108^\circ$$

$$\frac{\sin O}{10.3} = \frac{\sin 108}{15.7}$$

$$\sin O = \frac{10.3 \times \sin 108}{15.7}$$

$$\sin O = 0.6839$$

$$O = 39^\circ$$

$$M = 33^\circ$$
