## Survey Assignment

### Creating A Survey

- You and your partner will come up with a survey of 5 to 10 questions on an issue or topic of your choice.
- You must run this topic by your teacher by the end of class.
  
- Include a variety of question types.
- Follow the principles of proper surveying and steps for data collection.
- Choose a population that you will survey and a sampling method.
- Complete the survey data collection and use this data to create a summary for your survey.
- Display your data or parts of your data in **two different tables** and **three different types of graphs**.
- Your findings will be presented to the class and posted in the school
- You must collect categorical (groups), continuous (numbers with decimals) and discrete (integer values) data.
